

NERIS Workshop 2015

27-29 Apr. 2015

Palazzo Greppi, room "Sala Napoleonica"

Via S. Antonio 12 -20122 Milano

## **Fukushima: Four Years of Academic Community support to the State Efforts to Improve People's Lives in the Post Accidental Conditions**

Institute of Environmental Radioactivity (IER)  
At Fukushima University

Kenji NANBA, Mark Zheleznyak and Thomas Hinton

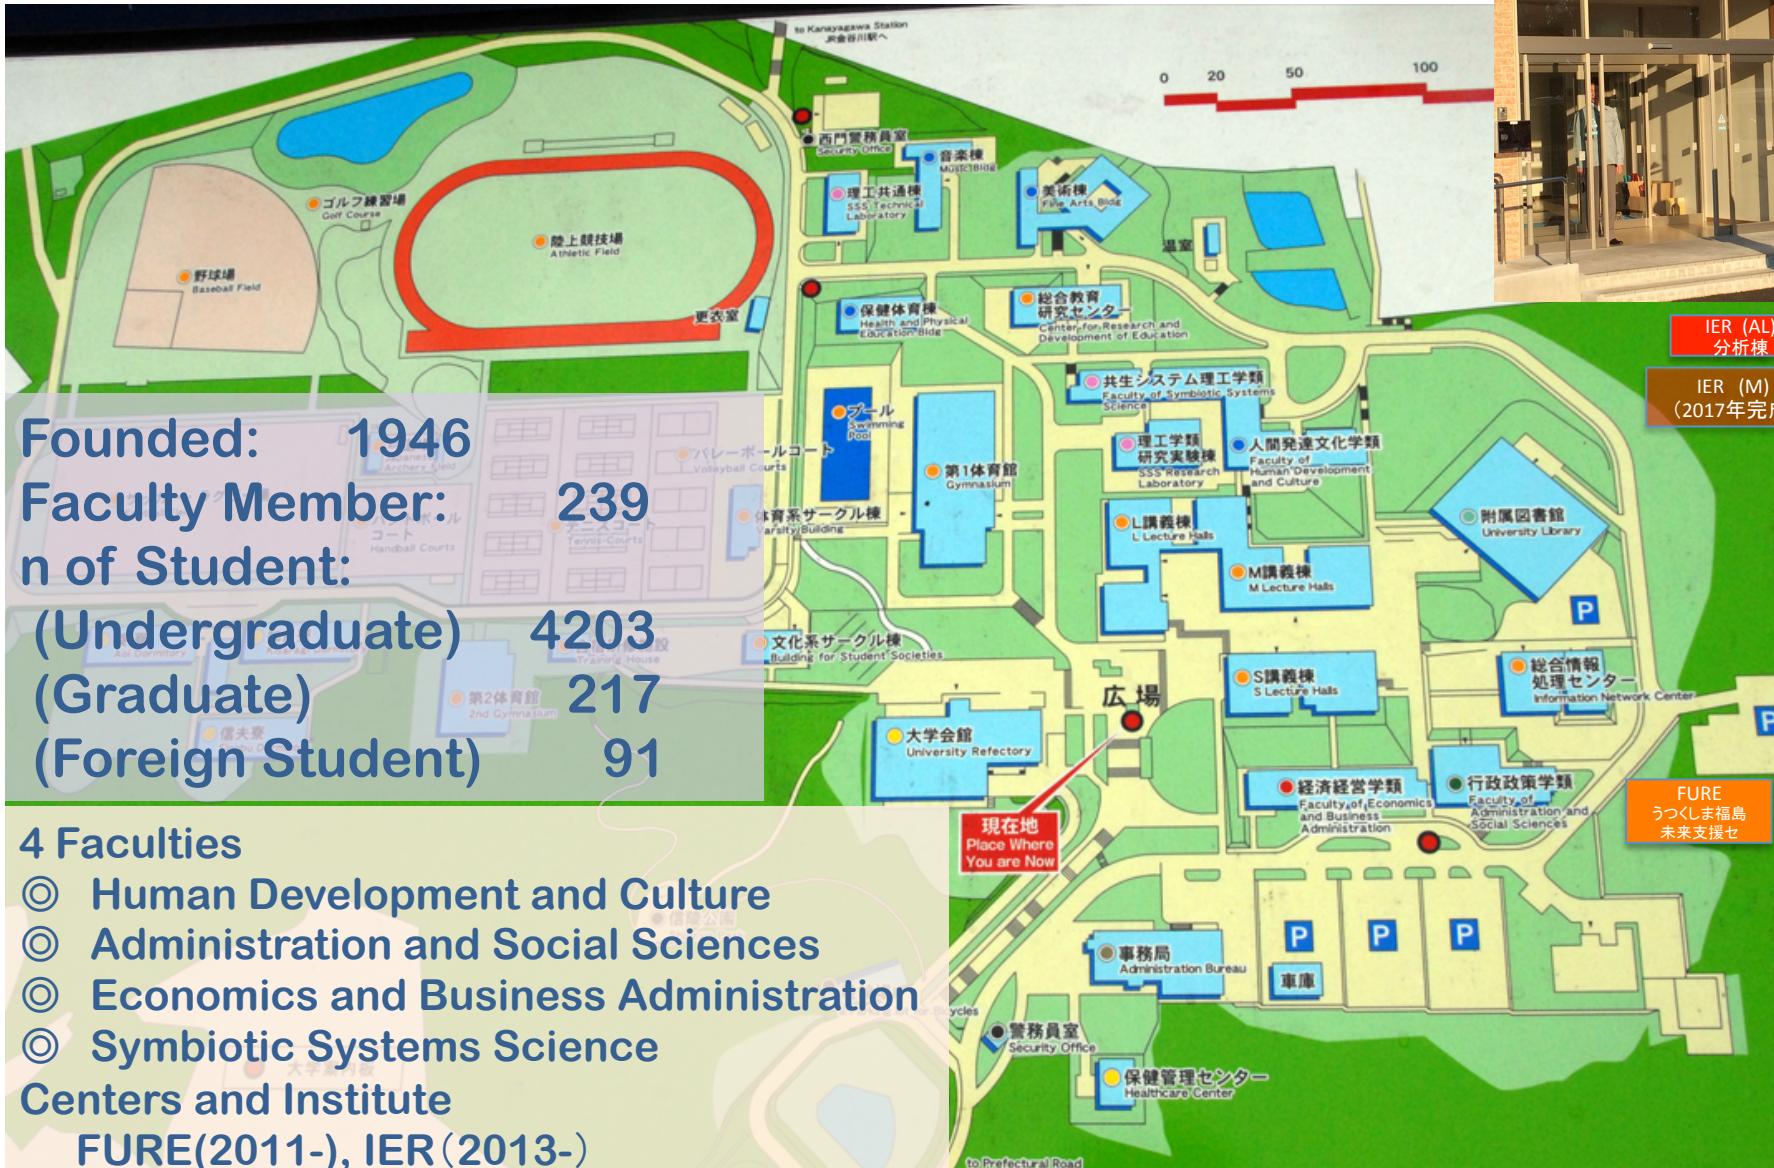

IER Buildings:

Analytical Lab.(AL)・Main(M)

FURE: Fukushima Future Center  
For Regional Revitalization

IER (M)  
本棟  
(2017年完成予定)

FURE  
うつくしま福島  
未来支援セ

# Researchers at IER

**Director**  
**Kenji Nanba**

Environmental Microbiology  
Transfer of rCs in freshwater system

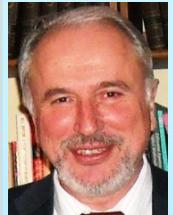

**Vice director**  
**Professor**  
**Hirofumi Tsukada**

Radioecology  
Agricultural env. and products

**Vice director**  
**Yuichi Onda** (Univ. of Tsukuba)

Hydrology  
Transfer in forest and aquatic system

**Professor**  
**Mark Zheleznyak**

Hydrology  
Modeling of nuclear transfer in water system

**Professor**  
**Thomas Hinton**

Radioecology  
Radioecology of wild mammals

**Associate Professor**  
**Toshihiro Wada**

Fish ecology  
Fisheries biology and ecology

**Senior Assistant Professor**  
**Yoshifumi Wakiyama**

Hydrogeomorphology

**Project Professor**  
**Michio Aoyama**

Marine physics and chemistry

**Project professor**  
**Alexei Konoplev**

Radiochemistry and radiobiology

**Project professor**  
**Sergii Kivva**

Statistics and hydrology  
Environmental modeling

**Project professor**  
**Vasyl Yoschenko**

Radioecology  
Forest ecology and products

**Project professor**  
**Valentin Golosov**

Geomorphology  
Nuclear transfer in the environment

**Project associate professor**  
**Tsugiko Takase**

Physical chemistry  
Development of analytical technique

**Project associate professor**  
**Alan Cresswell**

Physics  
Measuring system

**Project assistant professor**  
**Stefan Bengtsson**

Agriculture  
Radionuclides transfer in agricultural products

**Project assistant professor**  
**Olena Pareniuk**

Radiobiology  
Soil microbiology

**Project assistant professor**  
**Kei Okuda**  
Zoology  
Radioecology of wild mammals

Cooperative researchers  
Ishimaru, Takashi., Marine ecology, Tokyo Univ. of Marine Sci. and Tech.  
Hiroaki Kato, University of Tsukuba  
Aya Sakaguchi, University of Tsukuba  
Junko Takahashi, University of Tsukuba  
Shinya Yamasaki, University of Tsukuba  
Oguri, Emiko, Botany, Hiroshima Univ.  
Shoukamy Ibrahim Mahmoud Ibrahim, Zoology Hiroshima Univ.  
Mitsutake, Norisato, Nagasaki Univ.  
Ogi, Tomoo, Nagasaki Univ.

Participating profs from SSS Fukushima Univ.  
Takahashi Takayuki, Robotics  
Watanabe, Akira, Meteorology  
Yamaguchi, Katsuhiiko, Physics  
Takagai, Yoshihaka, Analytical chemistry  
Yokoo, Yoshiyuki, Hydrology / Civil eng.  
Kawagoe, Seiki, Hydrology of watershed

## 河川・貯水池・ため池の放射性セシウム移動のモデル化

Water depth and water velocity field of the Yokokawa Dam reservoir

## Involvement of Hydrological Study at IER in decision making and establishment of decision making scheme.

### IAEA – Fukushima Pref. Gov. Initiative Project (2012-)

Pref. gov. ask advise from IAEA in the management planning of the following area after the accident.

- River, lake and pond
- Forest
- Wastes

IER is contributing the project by sending to

River, lake and pond part:  
Alexei Konoplev as an IAEA delegate  
Mark Zheleznyak as an experienced observer  
& Kenji Nanba as a Japanese specialist

Contributing to PREPARE project (2014-)

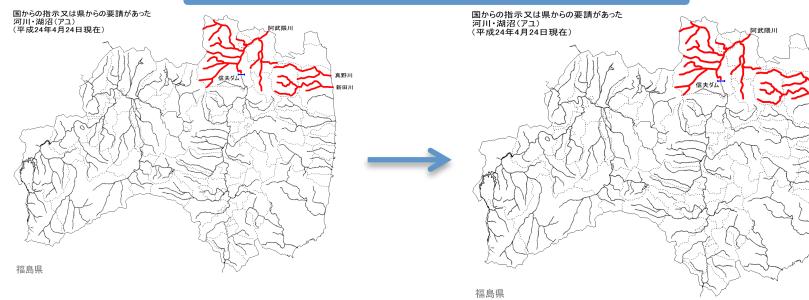

Rivers that are restricted to catch or to ship for respective fish species  
Figures by Fish Research Station of Fukushima Pref.

Fresh Water: H. Wada and K. Nanba

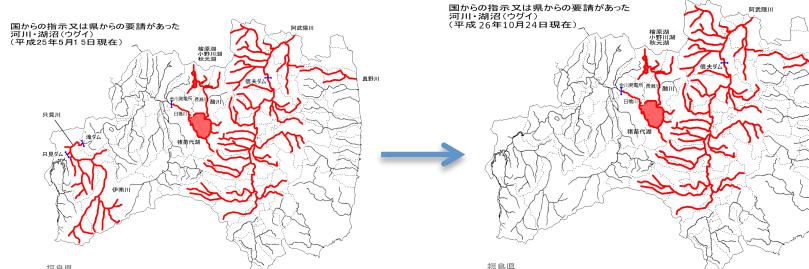

Restrictions are lifted based on intensive and extensive monitoring.

Sep. 2014 → Nov. 2014

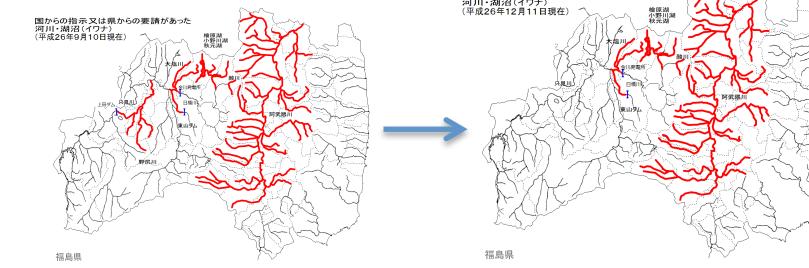

Ayu (*Plecoglossus altivelis altivelis*)

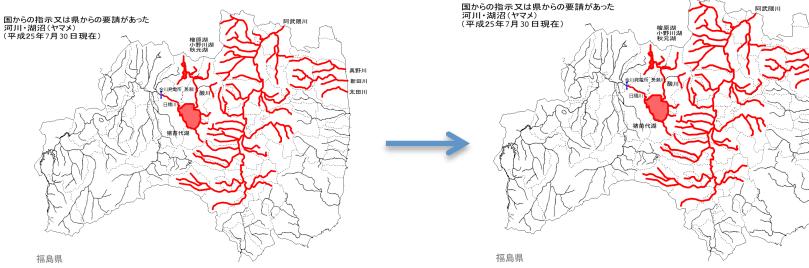

Ugui (*Tribolodon hakonensis*)

Iwana (*Salvelinus leucomaenis*)

Yamame(*Oncorhynchus masou masou*)

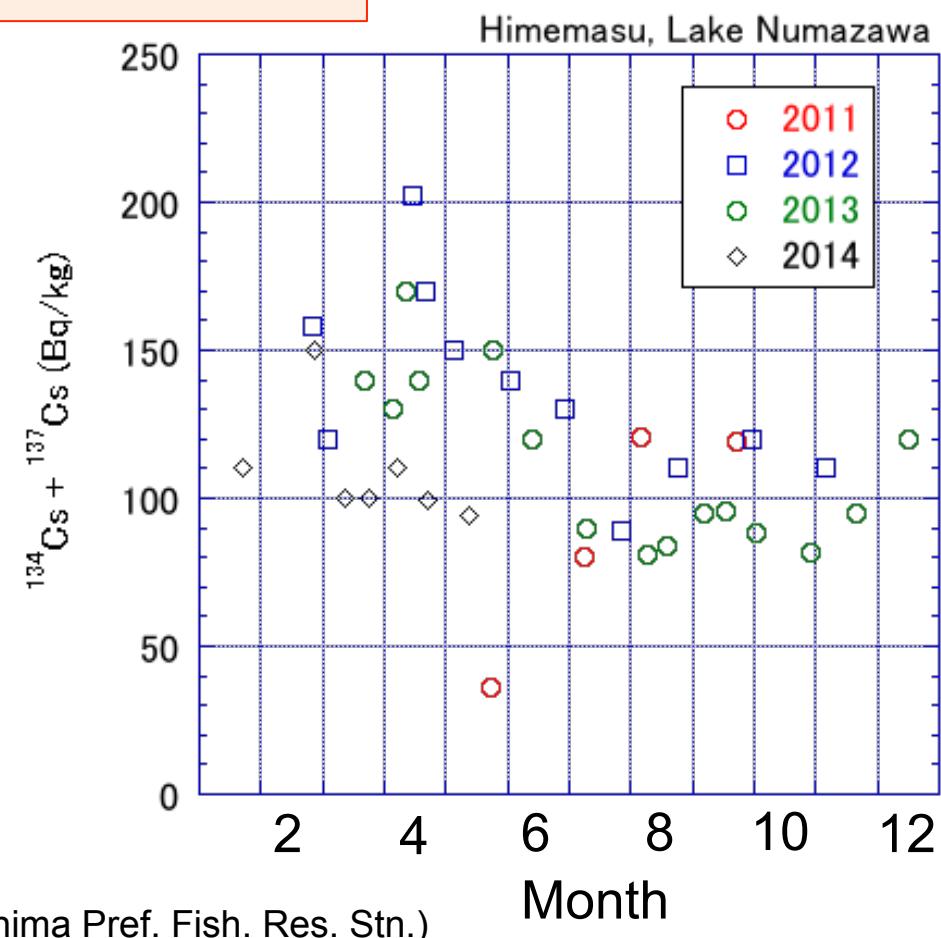

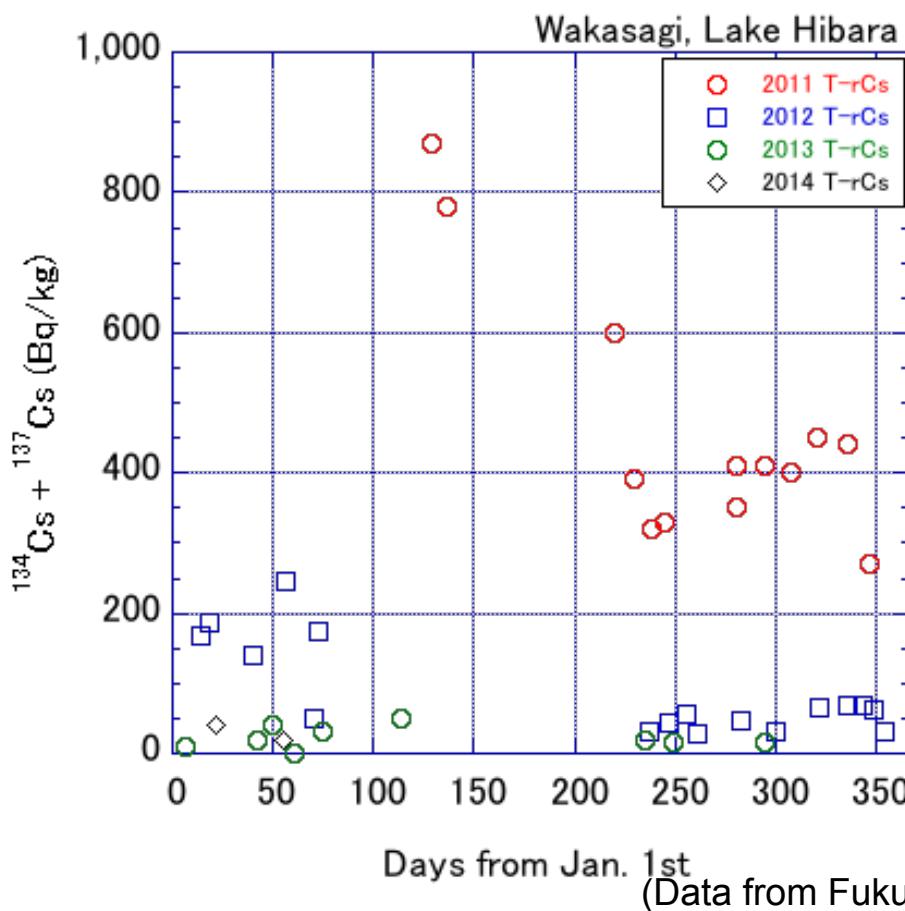

$^{134}\text{Cs} + ^{137}\text{Cs}$  (rCs)  
in Wakasagi (*Hypomesus nippponensis*)  
Lake Hibara

Fresh Water: H. Wada and K. Nanba  
Himemasu (*O. nerka*)  
Lake Numazawa

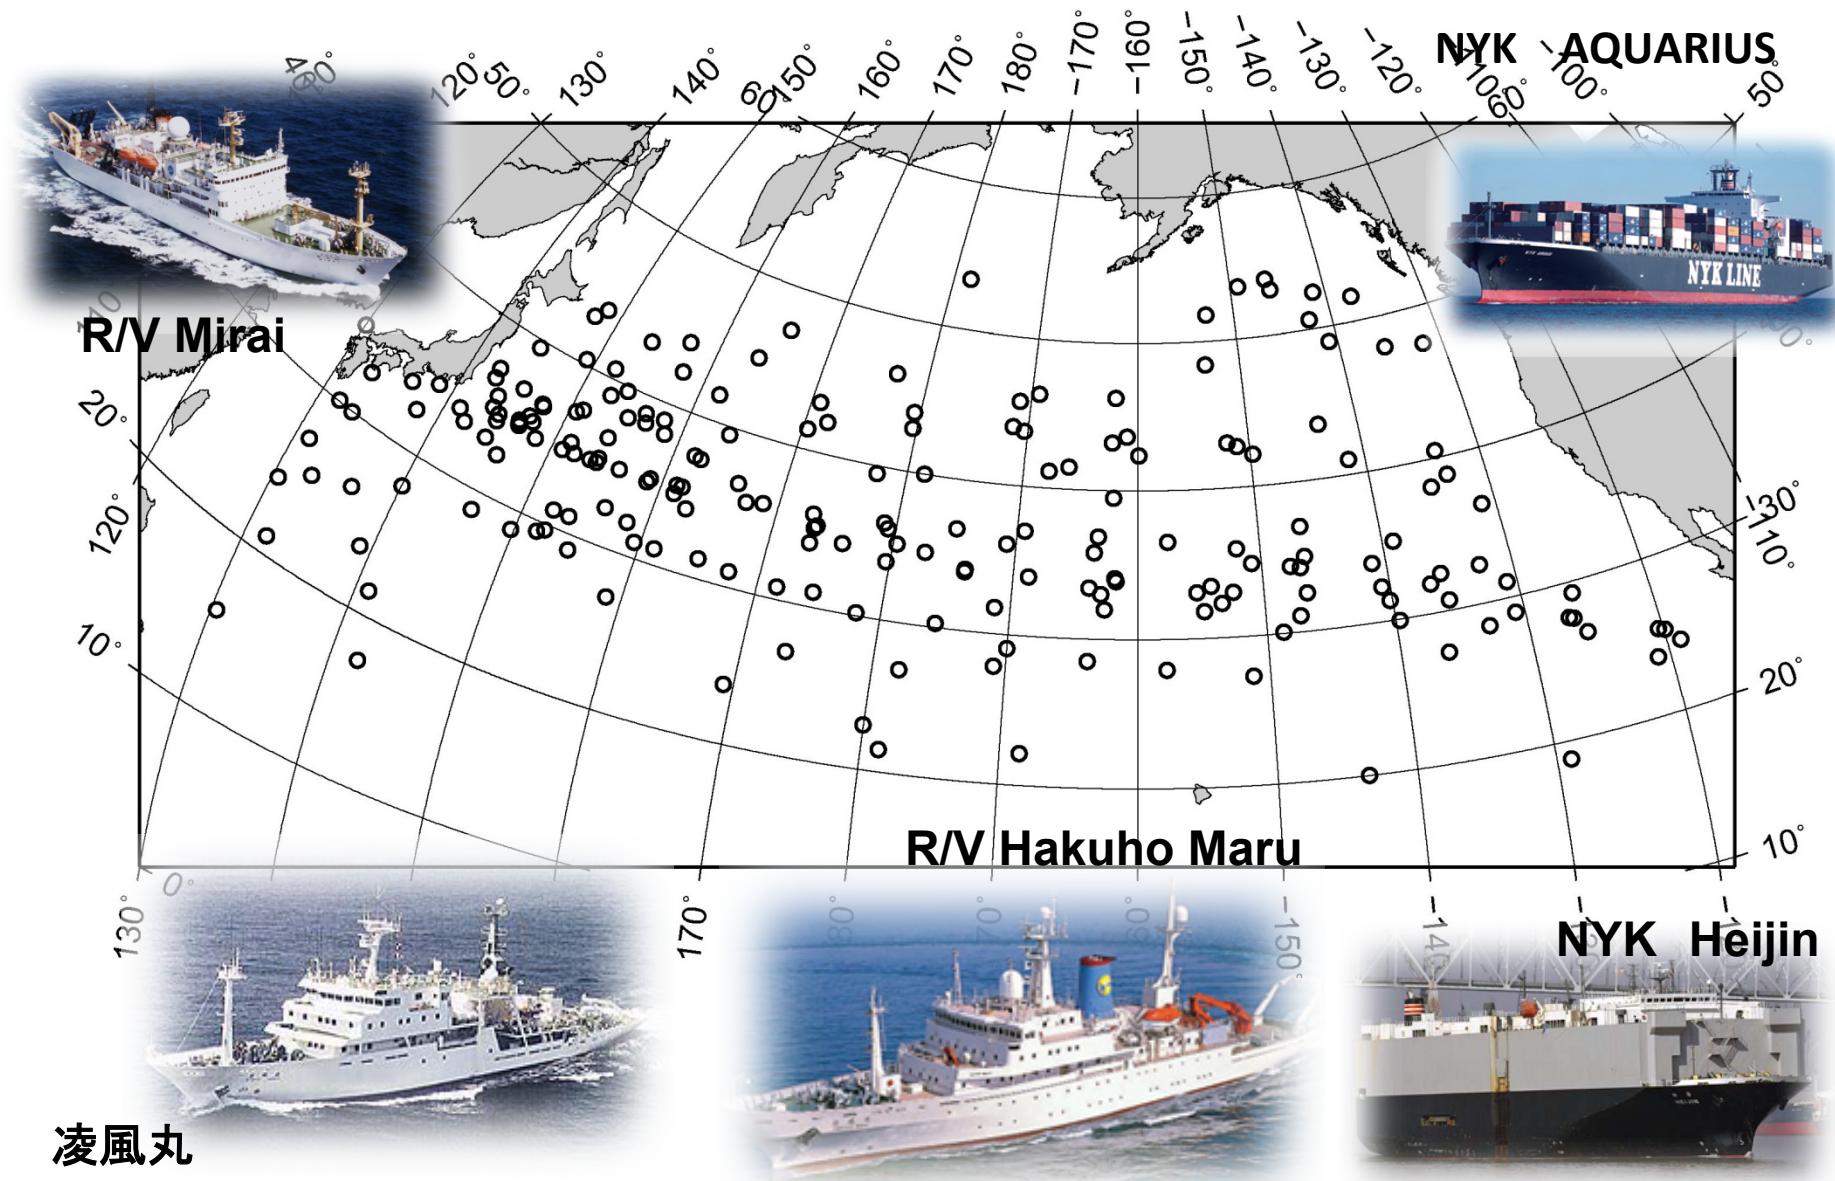

The different rCs trend comes from:  
Hydrological scheme?  
Food? – both are plankton feeder  
Physiological difference?

# Sampling locations during the period from March 2011 to Oct. 2012

Marine: M. Aoyama 1/2

Test fishery for 3 species started from Jun 22, 2012 in Fukushima.  
- Fishing effort (no. of days \* boats) < 3% of regular fishery

「試験操業」 安全が確認された魚種に限定し、小規模な操業と販売を試験的に行い、出荷先での評価を調査して、福島県の漁業再開に向けた基礎情報を得る。

Limited catch of the fish that are confirmed to be safe as food, small scale catch and sale to know the response from the market and consumers. These activities are basis for resume of Fishery. After confirmations, 58 species are now targetted (-Jan. 2015)

3魚種(ミズダコ, ヤナギダコ, シライトマキバイ), 現在(2015年1月)は58種

# Results of Monitoring of marine fish by Fukushima Pref Fish Res Stn (2015/2/25)

Fish: H. Wada

Red bar: n of ind. >100 Bq/kg  
Blu bar: n of ind. ≤ 100 Bq/kg

Yellow line: ratio of >100 Bq/kg  
Purple line: ratio of "Not detected"

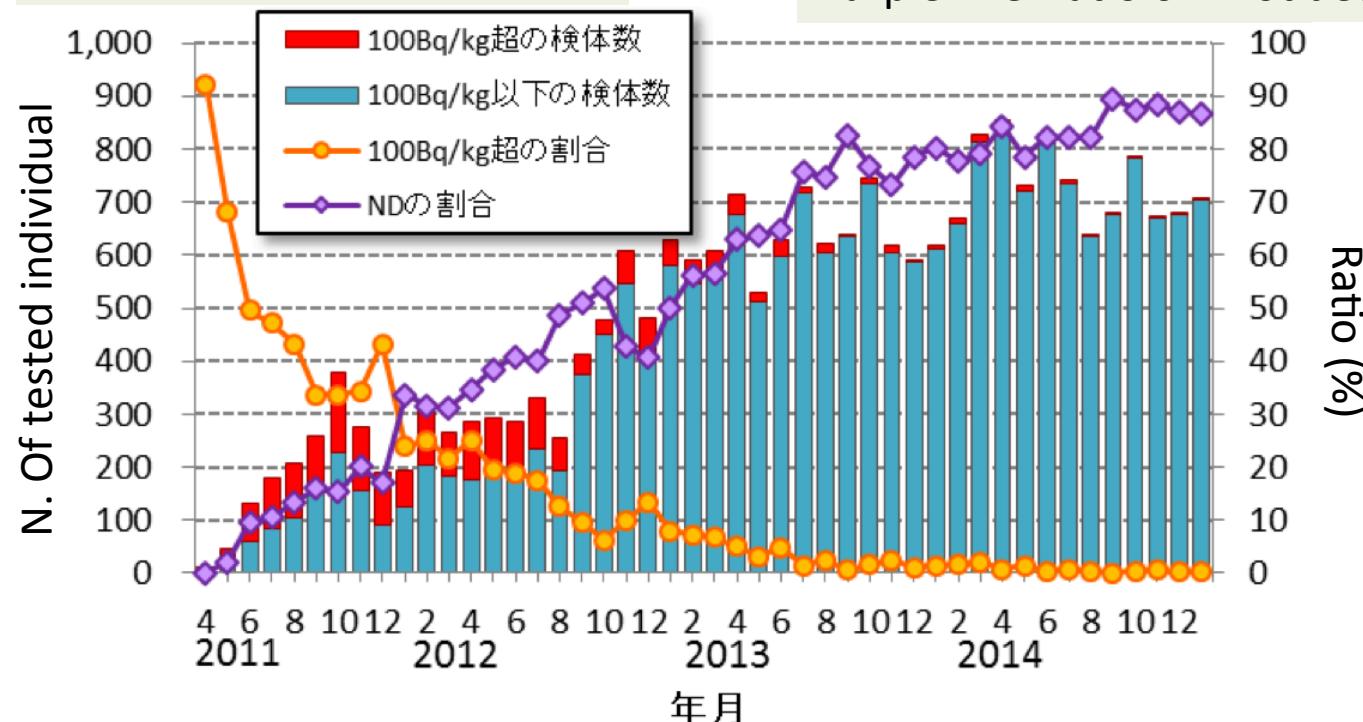

図5 検体数と放射性Csが100Bq/kgを超えた割合・NDの割合

- 原発事故直後は検体に占める 100Bq/kg 超過の割合が 50% を超えていたが、時間の経過とともに減少し、現在は 1 % を下回っている。一方、不検出の割合は現在 80% 台後半で推移している（図5）。

Feb. 25, 2015  
ヒラメ  
ホシガレイ  
ババガレイ  
メイタガレイ  
メバル類  
アイナメ  
カサゴ  
スズキ  
クロダイ

など全32魚種に国の  
出荷制限等指示が出  
ている。

32 species (including  
commercially  
important ones) are  
still restricted to ship  
etc. by National govt.

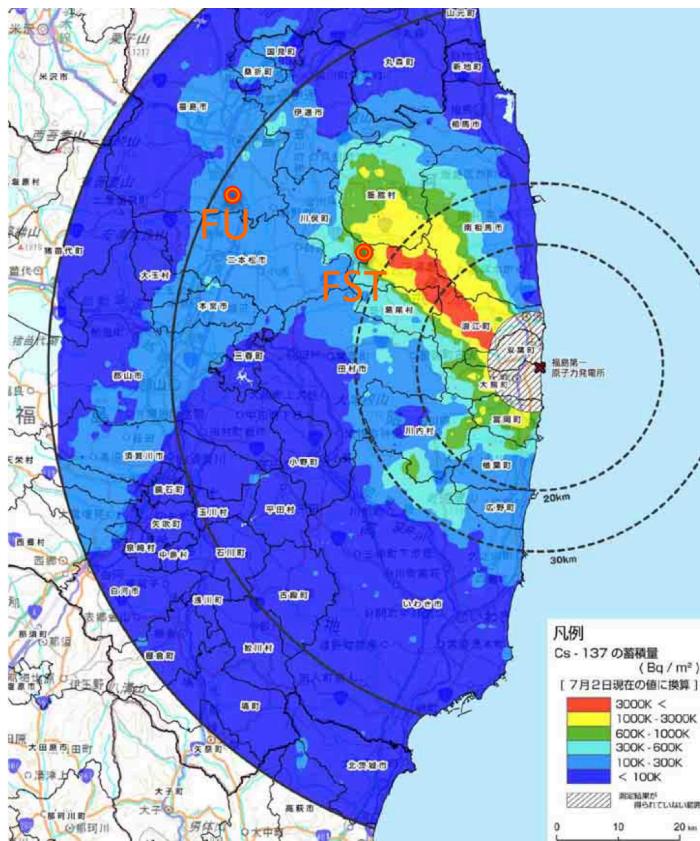

# Prognosis of RN levels in forests: IER Forest Project (started in 2014)

## Aim:

- long-term monitoring and modelling of radiocesium distribution and fluxes in the ecosystem

## Principal approach:

- monitoring of processes in the unsaturated zone for description of RN vertical migration
- quantification of RN uptake into biomass and return fluxes (throughfall, stemflow, litterfall)

Regulation levels of wood

To use for mushroom culture  
To build houses  
To use as fuels.

Are not decided yet..

# Yamakiya Observatory site

Yamakiya, Kawamata town

Cs-137 inventory 600 -1,000 kBq/m<sup>2</sup>

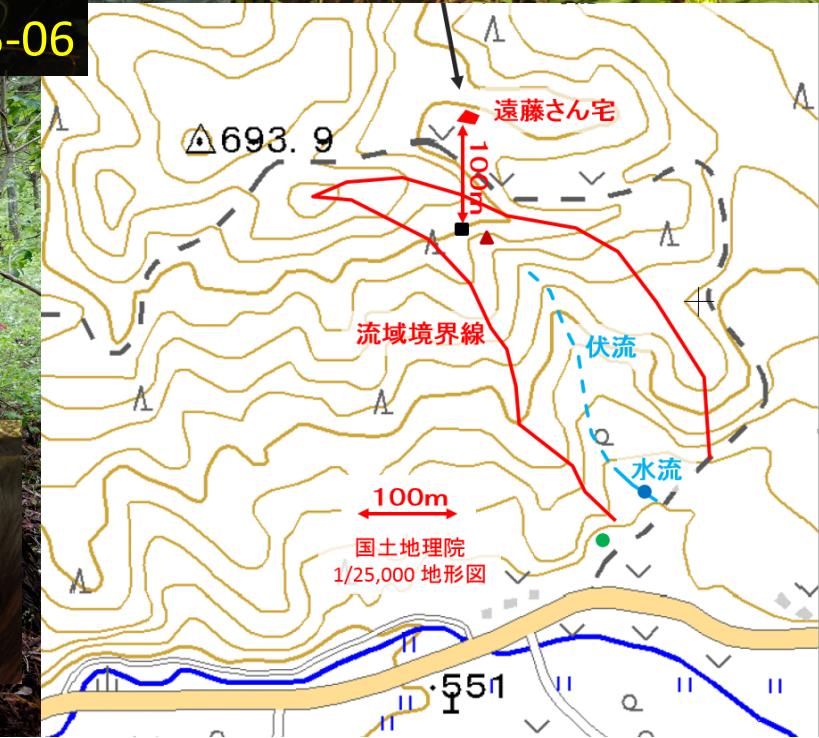

Vascular Plants 140905-06

Mushroom 140920

Forest: Visitors

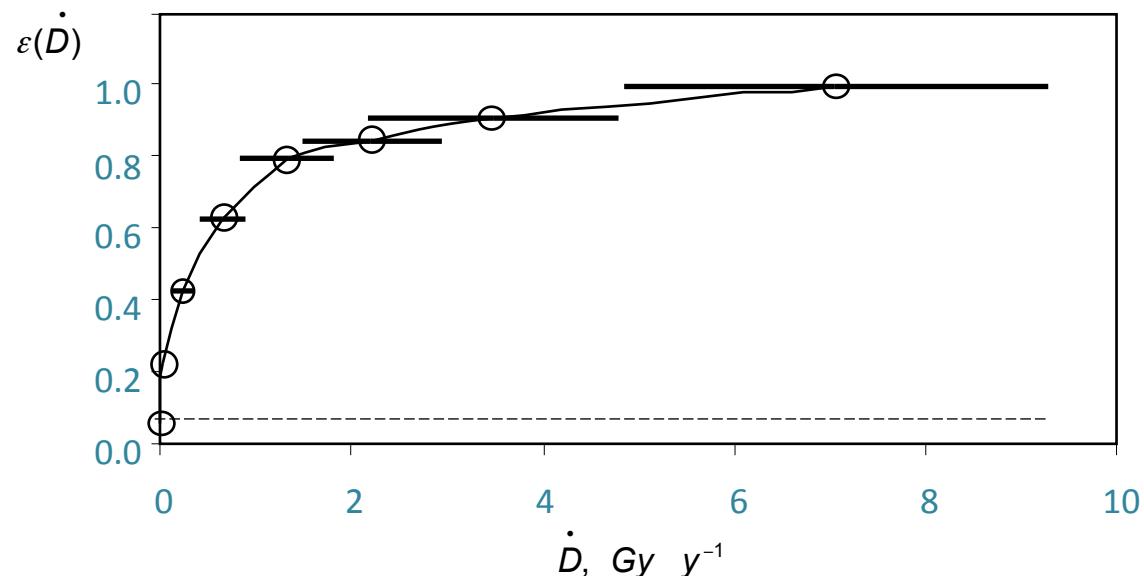

# Radiation effects to plants: Chernobyl vs Fukushima

CHERNOBYL:

Late stage morphoses in Scots pine –  
chronic radiation  
(by Yoschenko et al, 2011)

Typical morphological changes in Scots pine now: cancelling the apical dominance, suppressing the trees' growth

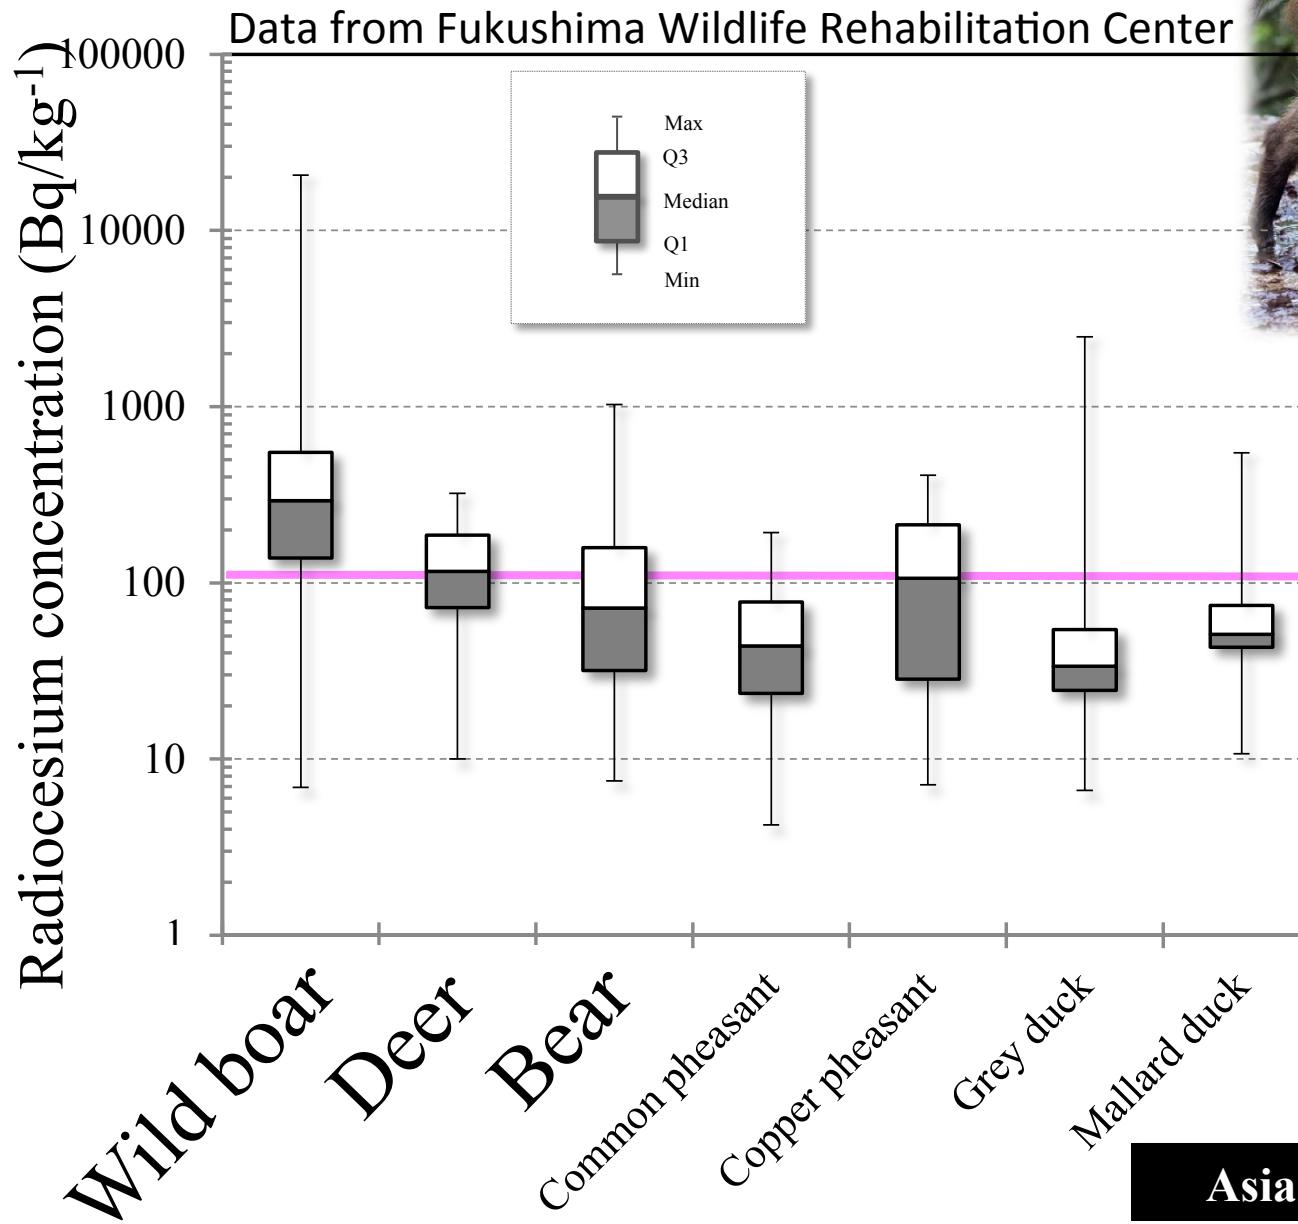

ERICA Tool screening value of  $10 \mu\text{Gy h}^{-1}$  corresponds to the morphoses frequency of 32%

FUKUSHIMA:  
many coniferous tree species.  
**ARE THE EFFECTS POSSIBLE?**

# Wild mammals

Transfer of rCs  
Estimation of Ext.& Int. dose  
Influence

Animal: T. Hinton & K. Okuda

Wild boar (*Sus scrofa*)

Sika deer (*Cervus nippon*)

Asian black bear (*Ursus thibetanus*)

## 米の全量全袋検査の流れ①

From 2012 all the rice harvested in Fukushima have been checked according to the scheme by pref. gov.

Checking with Belt conveyor- NaI: results on the bag  
Measured with HPGe when excess of regulation value was suspected.

Obtained Trust?

Among 10 million bags tested every year,  
the n. of the bag with >100Bq/kg is  
71 in 2012  
28 in 2013  
0 in 2014.

Spring in 2011  
Rice was planted where rCs in  
the soil < 5kBq/kg.

In the harvest season  
Oct. 12<sup>th</sup> pref gov. declared that  
the rice harvested is less than  
the regulation level and safe,  
after screening of  
representative samples.

Cs-134+Cs-137福島県農林水産部 (2011.10.12)

(単位：点)

| 調査点数 | 放射性セシウム暫定規制値 (500Bq/kg) 以下 |                |                                 |                                 |                                 | 500Bq/kg<br>超 |   |
